

side products

BURÇELİK produces side equipments to be used at crushing-screening plants, such as hopper, feeder, conveyor belt, surge bin, stock silo and automation systems as well.

Hopper and Feeders

Bolted and welded steel construction hoppers are used to store feed material for continuous operation. Vibrating Feeders, belt feeders and apron feeders are within production range of Burçelik.

Belt Conveyors

Belt conveyors are used to transport bulk material. Depending on requirements, stationary and slewing type of belt conveyors at various width and length are produced.

Stock Silo

Stock silos are used for short term storage of crushed and classified material. Pneumatically controlled discharge lids ease material loading to the trucks.

Automation Systems

Burçelik Automation Systems are controlled by PLC. Wide range of options such as weighing belt, Scada System, speed and feed controls are put forward depending on customers preferences.
